Suju Nair : Counterparty Credit Risk Tech Sr Business Analyst /Product Owner

Ph : +353 894185586
E-Mail : sujunair@gmail.com
LinkedIn : www.linkedin.com/in/suju-n-2b412b17

Work Status Ireland – Irish Citizen

Results-driven Product Owner with deep domain expertise in financial services, specializing in data-driven product delivery across Counterparty Credit Risk, Commercial Lending, Market Risk, Payments, Digital Banking, Treasury, and Money Market platforms

Skill Synopsis

Business Analysis & Delivery Leadership

- Lead **requirements workshops** and stakeholder sessions across Risk, Credit, Quant, and Technology teams.
- Produce high-quality **Business & Functional documentation** (BRD, FSD, RTM), ensuring traceability from regulatory observations to technical delivery.
- Estimate **project costs, effort, and delivery timelines**, supporting effective planning, governance, and prioritisation.
- Manage senior stakeholders across **multiple concurrent regulatory, audit, and risk initiatives** in a complex banking environment.
- Mentor **interns and junior Business Analysts**, and support BA hiring and onboarding for projects within the Dublin office.

Risk, Regulatory & Data Expertise

- Deep domain expertise in **Counterparty Credit Risk IT requirements**, including exposure analytics, aggregation, and reporting.
- Support and respond to system, data, and control queries arising from **ECB, FCA, and FRB regulatory examinations**.
- Contribute to **data lineage, governance, and controls** initiatives within the Counterparty Credit Risk data domain.
- Deliver regulatory and stress-testing driven enhancements in collaboration with Risk Managers and Credit Officers.

Agile & Product Delivery

- Extensive experience working in **Agile environments** (Scrum, Kanban), including **user story definition, backlog refinement, prioritisation, and sprint delivery**.
- Coordinate and support **end-to-end testing activities** across SIT, UAT, and Business Acceptance Testing (BAT).
- Drive cross-functional collaboration to deliver initiatives across **Global Banking and Credit Risk Management** platforms.

Technology & Data Skills

- **SQL (Advanced):** Extensive hands-on experience across **Sybase, Teradata, Oracle, and SQL Server**, supporting analysis, validation, and issue resolution.
- **Python:** Basic scripting and analytical capability to support data analysis and validation tasks.
- Strong familiarity with enterprise tooling: **Jira, Confluence, Octane**

AI-Augmented Delivery & Tooling

- Leverage **AI tools** including **GPT-5.2 (Codex, Agent, Ask Mode)** and **GitHub Copilot** to accelerate analysis, documentation, and solution design.
  - Took personal initiative to design and deploy an **Agentic AI** solution using GitHub Copilot and **MCP server** integration with Jira, enabling autonomous querying of epics, stories and releases without manual JQL. The agent independently generates Acceptance Criteria, functional and non-functional requirements, creates sub-tasks and updates Jira directly — significantly reducing sprint preparation effort and freeing capacity for higher-value delivery work.
- Use **Microsoft Copilot** to create **UI mock-ups**, summarise complex discussions, and rapidly translate regulatory and business requirements into delivery-ready artefacts.
- Proficient with modern IDEs: **Visual Studio Code** and **IntelliJ IDEA**.

Professional Experience Details

Bank of America **(Jul'2022- Till Date)**
Senior Business Analyst, Product Owner Counterparty Credit Risk Tech
Domain: Banking & Financial Services
Vice President –Analyst II

Role: Product Ownership and Delivery Leadership, Counterparty Credit Risk Technology

- Ownership of end-to-end requirements across multiple Counterparty Credit Risk applications, including consolidation of business needs, clarification with stakeholders and translation into clear, testable specifications.
    - Delivered Counterparty Credit Risk solutions covering **Potential Exposure (PE)** and **Settlement Risk (Maximum Daily Delivery Exposure)** using Monte Carlo-based analytics across multi-tenor horizons.
    - Drove aggregation and reporting of exposure data across counterparty, legal entity, and product hierarchies, sourcing analytics into **Sybase** and surfacing insights via enterprise risk UIs.
    - Owned regulatory and stress-testing driven enhancements, translating complex risk and quantitative requirements into user stories delivered by technology teams.
    - Collaborated closely with **Risk, Quant, Credit, and Technology stakeholders** to ensure accurate, scalable, and regulator-ready CCR platforms.
- Ensure delivery of regulatory (MRA, MRIA) changes associated to our focus areas
- Gather requirements from senior stakeholders and replay them to our development teams
- Create story maps and user stories, identify sequence of development and dependencies
- Identify, triage issues and ensure delivery timelines are adhered
- Leadership of cross-functional teams to deliver strategic initiatives, including coordination of analysis, design, development, testing, release activities and post deployment validation, as well as representation of changes in governance and stakeholder forums.
- Analysis and resolution of system and data-related queries raised during ECB, FCA and FRB regulatory examinations, ensuring data accuracy, auditability, transparency of methodologies and robust documentation of responses.
- Conduct post development user testing to ensure requirement coverage and end user communication.
- Execution of Counterparty Credit Risk data attribute lineage analysis and updates, enhancing transparency, traceability and control across upstream and downstream systems

- Management and mentoring of junior analysts from intern and graduate programmes, including day-to-day guidance, performance feedback, and participation in screening and interviewing of business analyst candidates across the Dublin campus.

- AI-Assisted Product & Engineering Enablement
  - Utilized **AI copilots and GPT-based tools** to draft and refine **clear, testable acceptance criteria**, improving story quality and reducing rework during sprint execution.
  - Use **Microsoft Copilot** to rapidly create **UI mock-ups and interaction flows** for Counterparty Credit Risk dashboards, accelerating validation of regulatory and risk requirements with stakeholders.
  - Applied AI assistance to **summarize Business Requirement Documents (BRDs)** into concise, actionable user stories and delivery artifacts.
  - Used AI tools to **summarize stakeholder emails, meeting discussions, and decisions**, ensuring consistent communication and faster alignment across cross-functional teams.
  - Accelerated analysis of **Java applications** by using AI-assisted code exploration in IDEs (VS Code, IntelliJ) to understand functionality, flows, and technical constraints.
  - Built an **Agentic AI** agent that connects GitHub Copilot to Jira, autonomously handling story lookups, requirements generation and Jira updates — significantly cutting sprint preparation effort

---

NTT DATA Services **(Oct'2021- June'2022)**
Business Analyst, Loan Origination & Monitoring
Domain: Banking & Financial Services
DELL's Customer: Allied Irish Bank
